# AI Governance Framework

There is no one-size-fits-all AI governance structure; essential components include roles at strategic, tactical and operational levels

STRATEGIC

TACTICAL

OPERATIONAL

Governance Committee

Center of Excellence (CoE)

Operational Owners*

Key Characteristics

- **Final decision-making power around AI use**
- Alignment with organizational goals and ethical standards
- Ongoing enterprise-wide risk management

- **Oversight of AI initiatives and technical aspects**
- Development of AI standards and architecture
- Alignment of technologies and tools leveraged by all teams across the enterprise

- **Design AI solutions and monitor their performance and compliance**
- Review AI data sets for compliance with risk, privacy, ethics, and legal requirements

Operational owners are leaders who are responsible for workflows, change management and ongoing tracking of success metrics
